6G4 SOCIETY

**Towards
a sustainable and
accepted
6G for society**

Visit 6g4society.eu

Our vision

Our project aims to ensure that **societal and sustainable values are properly embedded into the development of 6G technology**, bringing a sociological perspective to technological development.

Our goals

Get a better understanding of **aspects influencing public acceptance** of 6G;

Supporting the development of an **EU consensus framework** for a value-based, sustainable and ethics-driven approach towards 6G;

Engaging and reaching out to public audiences to **build 6G social acceptance**;

Empowering the 6G community to **reflect EU policy and legislation into technology solutions**.

Our approach

6G4Society will engage key stakeholders from civil society, regulators, policymakers, media, and the general public, to ensure **correct and clear information about the expected impacts of 6G technology**.

The project will also provide **methods, models, guidelines and policy recommendations** to develop a sustainable and socially accepted 6G.

Let your voice be heard!

Take part in our **Citizen Survey and shape the future of 6G**. Share your thoughts and help guide European leaders and technology providers as they design a more inclusive and sustainable approach to future connectivity.
